

Nexora Security and Compliance

Security and compliance are critical components of Nexora Systems' enterprise offerings.

Security Architecture

Nexora platforms are built on a secure cloud architecture that includes multiple layers of security protection.

These include:

- encrypted data storage
- encrypted data transmission
- role based access control
- network segmentation
- intrusion detection systems

All production environments are isolated using dedicated virtual networks and access control policies.

Compliance Certifications

Nexora Systems maintains compliance with several international security and privacy standards including:

- SOC 2 Type II
- ISO 27001
- GDPR data protection regulations

These certifications ensure that Nexora platforms meet the security requirements of enterprise customers operating in regulated industries.

AI Safety Measures

Nexora platforms include built in AI safety mechanisms designed to detect and mitigate problematic model outputs.

These mechanisms include:

- hallucination detection algorithms
- toxicity monitoring

- policy violation detection
- model output filtering

These safety systems are continuously improved through internal research conducted by the Nexora AI safety team.
