

Nexora Hiring and Recruitment

Nexora Systems recruits engineers, data scientists, and infrastructure specialists to support its rapidly growing AI platform ecosystem.

The recruitment process typically includes the following stages:

1. resume screening
2. technical assessment
3. system design interview
4. culture fit interview
5. final leadership discussion

Candidates applying for AI infrastructure roles are expected to demonstrate knowledge in the following areas:

- machine learning fundamentals
- distributed systems
- vector databases
- retrieval augmented generation
- large language model architectures

Internship programs typically last between three and six months and may convert into full time employment depending on performance.
